Confidently Collaborate on Sensitive Files Externally Without Losing Control

Secure file storage and sharing that maintains protection and governance even after sharing with external parties.
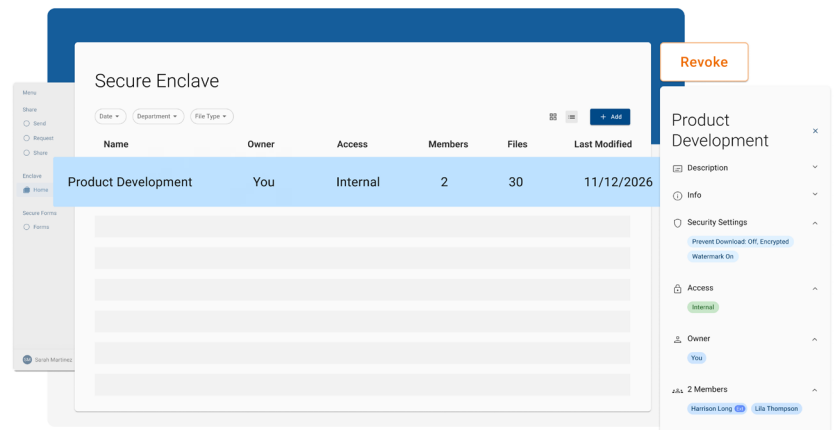

The External File Sharing Tradeoff

Your organization must share sensitive files—CUI, PHI, financial records—with external parties. Traditional file storage and sharing tools often force a tradeoff between keeping files secure by locking them down or sharing files externally but losing control once they leave your environment. For organizations in regulated industries, this impossible choice creates unacceptable risk.

Secure File Storage and Sharing That Maintains Control

Virtru Secure Share Enclave eliminates this tradeoff by providing a secure environment where teams can confidently share sensitive data with anyone without sacrificing efficiency or control. Create secure workspaces for team and external access, or share files directly to recipients while maintaining complete authority over access, permissions and governance at all times.

Key Capabilities:

- Spin up secure collaboration workspaces in minutes for new projects, contractor teams, or partner engagements, without IT bottlenecks

- Maintain control over sensitive files with the ability to adjust or revoke access at any time, even after sharing

- Prevent lingering access risk with permissions that adjust automatically when clearances change, contracts expire, or files are reclassified

- Enable frictionless external access via browser, no software or new account setup required

- Enforce consistent data policies everywhere by integrating with your existing DLP tools

Purpose-Built for Regulated Industries

Virtru Secure Share Enclave is a FedRAMP-authorized and FIPS validated solution, engineered to support the most stringent data security requirements including CMMC Level 2, HIPAA, GLBA, ITAR and other regulatory frameworks.

Maintain Control Beyond Your Perimeter

Enable Confident External Collaboration

Share CUI, PHI, and other sensitive files with external contractors, partners, and collaborators without creating compliance gaps or blocking critical workflows. Files remain encrypted and governed by your policies even after reaching external recipients, enabling the operational effectiveness your business needs without compromising security.

Maintain Complete Visibility

Track every access attempt, file view, and download across all externally shared files. Prove compliance with comprehensive audit trails that extend beyond your environment.

Respond to Changing Circumstances Instantly

Revoke access or modify permissions in seconds, even after files have been shared. Context-aware access controls also adapt automatically as user entitlements or file classifications change, combining on-demand control with automated governance to eliminate lingering access risk.

Support Strict Compliance Requirements

Support data security requirements for rigorous compliance frameworks including CMMC, HIPAA, SOX, and GLBA.
