VIRTRU SHARE

Send and Receive Encrypted Files: Collaborate With Anyone, Anywhere

Virtru Share is an encrypted file sharing platform that allows you to share and collect the files you need to expedite your digital workflows.

Ideally suited for situations where sensitive information is being exchanged, Virtru Share users retain complete control over their shared data and can revoke access to it at any time. This gives collaborators peace of mind and confidence to share even the most sensitive intellectual property, personally identifiable information (PII), personal healthcare information (PHI), or other regulated information.

Accelerate Productivity and Remove Barriers of Digital Collaboration

Quickly Get the Data You Need

- Easily share files directly from your desktop and cloud storage apps - even large files not supported by email.
- Share your personal link anywhere so collaborators can securely deliver files to you via Slack, Microsoft Teams, video chat and more.
- Automate file requests by integrating Virtru Share with your ERP, finance, or CRM system.
- Receive notifications when shared files are accessed and when files are shared with you.

Build Trust With Secure File Sharing

- Equip your employees with a seamless method for securely sharing content internally or with external collaborators so that they do not resort to unsecure workarounds.
- Rights holders can grant and revoke access to their sensitive data at any time and manage it with easy-to-apply expiration dates or watermarks on files.
- For elevated security requirements - like CMMC or ITAR - pair with the Virtru Private Keystore for true end-to-end encryption and full control of your keys.

Integrate With Tools Your Team Uses Every Day

Easily and securely share sensitive information directly from the business applications your team already uses, so you can avoid delays in workflows without sacrificing security.

- Microsoft OneDrive
- Microsoft SharePoint
- Microsoft Teams
- Google Drive
- Zendesk

Streamline Your Digital Workflows

Secure Data No Matter How It's Shared, Where It Lives, or Who Has Access to It

- Virtru Share is part of Virtru's Data Harbor Platform, a holistic suite of data protection products and solutions. Like Virtru's other encryption offerings, Virtru Share leverages the powerful Trusted Data Format (TDF), which protects data throughout its entire lifecycle.
- Use Virtru to protect data everywhere it flows through your organization: through email, enterprise applications, file sharing solutions and collaboration tools.
- Set up automatic security rules to maintain consistency and support your file security requirements.

Increase Speed and Efficiency

- No downloads required for you or collaborators: Get up and running in seconds and work where you prefer, either within your browser or on your desktop.
- User-friendly design makes fast adoption of secure data sharing intuitive and easily accessible.
- Save files that have been shared with you via Virtru Share directly to your desktop or cloud storage apps, streamlining collaboration while maintaining security controls.

Support Compliance and Data Security Requirements

- Data centric encryption protects files throughout their lifecycle, from upload to storage sharing.
- Virtru supports global security mandates, data sovereignty, residency, and data protection requirements for compliance, including HIPAA, GDPR, PCI, CCPA, CJIS, FERPA, and IRS Pub 1075.
- Virtru Share is FIPS validated, helping support advanced security requirements mandated by certain regulatory obligations, including CMMC and ITAR.
