

Virtru Data Protection for Gmail

Easily protect Gmail messages and attachments, and maintain control everywhere they're shared.

Keep Your Gmail Secure & Compliant

Virtru helps you secure emails and attachments in Gmail to maintain compliance, no matter where information is shared. With seamless encryption and granular security controls, you can protect sensitive data throughout its lifecycle while meeting regulatory requirements. Virtru for Gmail is FIPS validated, helping support advanced security requirements mandated by certain regulatory obligations, including CMMC and ITAR.

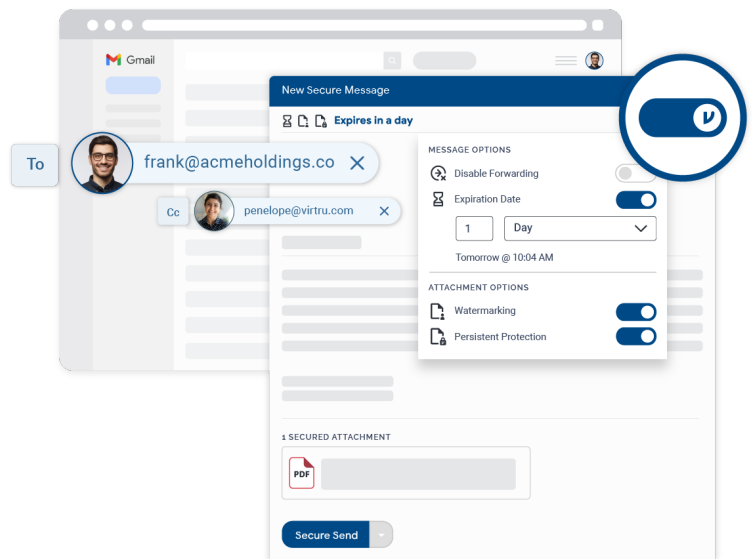

Simple, Powerful Email Protection

One-Click Encryption

Encrypt sensitive messages and attachments with a single click, preventing unauthorized access wherever your data travels, all directly within your familiar Gmail interface.

Complete Control of Your Data

Keep your emails secure with powerful controls that let you revoke messages, set expiration dates, disable forwarding, disable downloading, and add watermarks to attachments. Maintain control of your information even after it's been shared or downloaded.

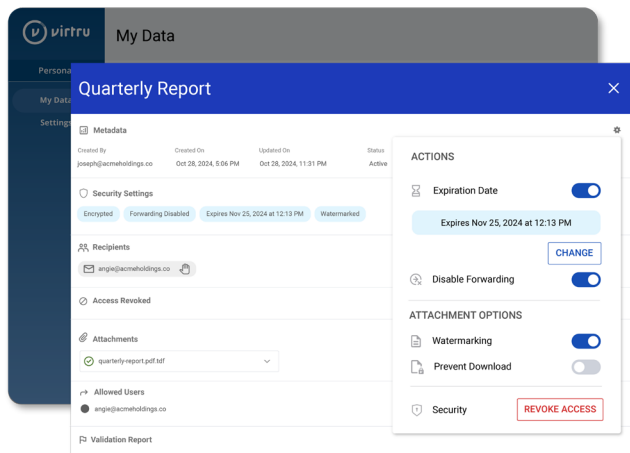

BROWN

"Virtru is extremely easy to install and use, and it works seamlessly with our Gmail. Compared with legacy email encryption products, it's a breeze."

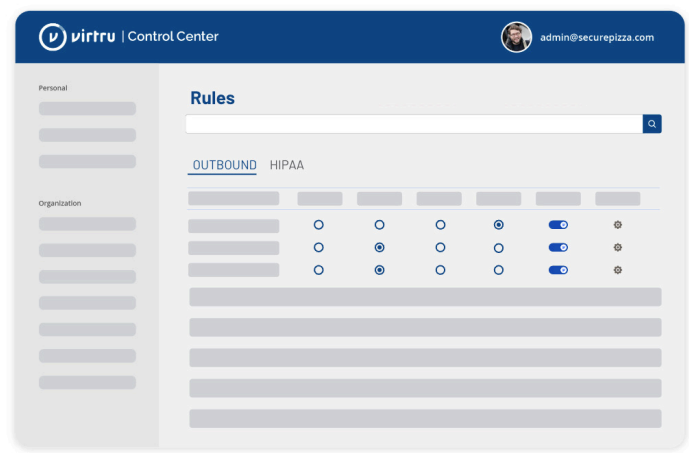

– Mark Dieterich
Director of IT and Security, Brown University

A Closer Look at Virtru Data Centric Security for Gmail

Granular Visibility and Audit

Gain insight into how your sensitive data is being used and shared. Users monitor their own emails while administrators maintain organization-wide oversight. Integrate with your SIEM system for comprehensive security monitoring.

Easy-to-Use Security Rules

Automatically enforce Gmail encryption with security rules that detect, protect, and control sensitive data. Reinforce security awareness with proactive alerts that block or warn users to protect sensitive email.

Industry-Leading Ease of Use

Deploy organization-wide in minutes. Support your users without changing the way they work today, and enable seamless access for recipients via existing accounts.

Encryption Key Management

Take complete ownership of your encrypted data. Host your private encryption keys anywhere with Virtru Private Keystore and collaborate with total confidence that your data remains under your control.

Protection Against Human Error

Keep data secure against mistakes with the Virtru Data Protection Gateway. Automatically encrypt sensitive information using precise security rules without disrupting workflows.
