

Virtru for Google Workspace

Protect Your Sensitive Data Across Your Google Ecosystem

Virtru delivers data-centric security that travels with your sensitive information. Protect emails in Gmail, secure files shared from Drive, safeguard content in Docs, Sheets, and Slides, and encrypt Google Meet communications—all while maintaining complete control and preventing access by third parties (including Google). Virtru's unified protection framework keeps your data secure wherever it goes.

Why organizations Choose Virtru

Organizations trust Virtru to protect their most sensitive data without sacrificing productivity or ease of use. Our solutions provide enterprise-grade security that integrates seamlessly with Google Workspace, allowing your teams to collaborate securely while maintaining compliance. Virtru's comprehensive suite deploys quickly across your Google environment, delivering powerful encryption and control capabilities with minimal IT overhead and user training.

Powerful Protection for Gmail

- Encrypt and decrypt messages and attachments with one click directly in your Gmail interface.
- Meet advanced compliance requirements with FIPS-validated encryption for Gmail, supporting CMMC, ITAR, and other regulatory frameworks.
- Set message expiration, prevent forwarding, track message access, and revoke access instantly.

Secure External Sharing from Google Drive

- Share Docs, Sheets, Slides and other files with external collaborators in a secure, controlled and auditable way.
- Protect the sensitive files stored in Drive by leveraging Virtru Secure Share as your secure, external sharing mechanism.

Granular Access Controls

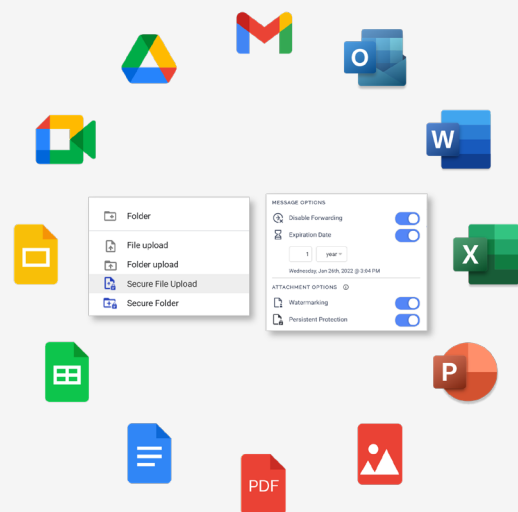

- Set message expiration, prevent forwarding, track document access, and apply custom watermarks.
- Revoke access instantly to any protected content, even after it's been shared or downloaded.
- Maintain persistent protection that stays with your files regardless of where they travel.

Key Management for Google Client Side Encryption

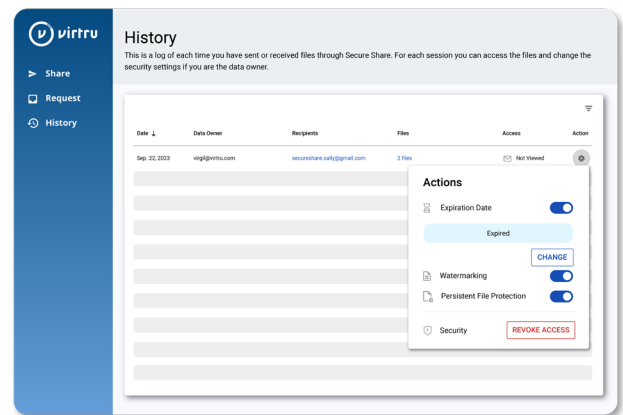

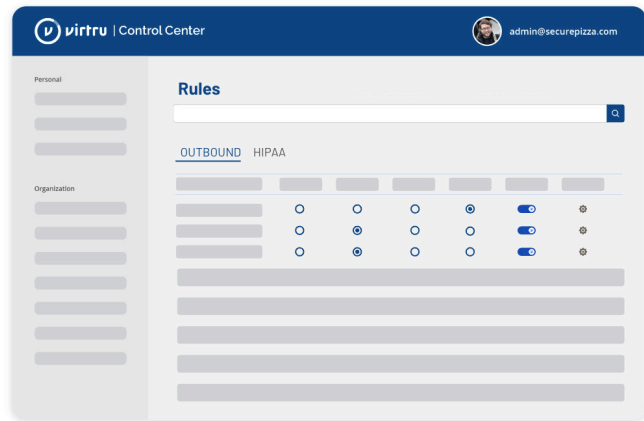

- Keep your most sensitive content truly private in Docs, Sheets, Slides, and Drive File Stream.
- Apply custom labels to documents and automatically enforce access controls based on your Google Workspace groups for more granular access control for CSE protected files.
- Encrypt Google Meet calls and video messages to prevent third-party access.

Extend Protection Beyond Google

- Apply consistent security across your other critical applications—including CRM platforms, analytics tools, and more—for comprehensive data protection.

Complete Visibility and Control Over Your Sensitive Information

- Automate protection with intelligent security rules that identify and encrypt sensitive data.
- Configure custom rules for specific data patterns or deploy pre-configured rule sets for common compliance needs.

- Access detailed audit trails showing who accessed protected content, when, and where.
- Generate comprehensive reports for compliance verification and security monitoring.

The Virtru Advantage

Frictionless Security Experience

Works seamlessly within your Google environment—no workflow disruption, no broken search functionality. Administrators deploy quickly, users secure content with a single click, and recipients access protected information without creating accounts or remembering portal passwords.

Comprehensive Compliance Support

Support your compliance strategy for HIPAA, GDPR, ITAR, CMMC and other regulatory frameworks with Virtru. Our encryption, access management, and audit capabilities strengthen compliance efforts while maintaining workflow efficiency. For heightened data sovereignty needs, Virtru Private Keystore offers advanced key management options.

Actionable Security Intelligence

Gain centralized visibility into how your sensitive data moves inside and outside your organization. See what you're protecting, who's accessing it, and where it's going—even after it leaves your domain. Integrate with your SIEM system to enhance threat response and streamline compliance reporting.
